

Sicp Notes

Mohammed Shahid

Prefix Notation: Placing an operator to the left of the operands.

Advantages:

1. It can take any number of arguments for a procedure.

```
(+ 10 23 88 123 908)
```

```
;Value: 1152
```

2. No Ambiguity can arise because the operator is always the leftmost element and the entire combination is delimited by the parentheses.
